

Acceleration Service - VMware for Virtual Infrastructure

Edge Solutions

Dedicated to Your Success

Edge Solutions is a premier IT solution provider committed to bringing you the best in solutions and services that the market provides. As a result, Edge Solutions has teamed with services partners to deliver assessment and implementation services that accelerate the adoption of virtualization technology to drive the success of your business.

Service Overview

If your organization is in the early stages of selecting technology for your virtual infrastructure, Edge Solutions offers an upfront VI Acceleration Service to educate, evaluate and help plan for the implementation of a virtualization solution.

Top Service Benefits for VI Acceleration

- Accelerate your knowledge of VI, VDI or SRM technology
- Learn how to apply these tools to your custom environment
- Identify any critical gaps in your current infrastructure through an infrastructure audit
- Plan an optimized deployment model working with virtualization experts
- Speed your successful adoption of the technology—get it right the first time
- Avoid expensive and time-consuming mistakes and troubleshooting

Top Areas of Consideration for VI Implementation

- How much experience does your team have in deploying virtual server systems?
- What is your plan for data management? Security management?
- How will you avoid virtual machine “sprawl”? What policies and best practices do you have in mind to help control this tendency?
- Have you considered data deduplication options?
- Replication?
- Have you audited your network and storage infrastructure?

Continuous Improvement is the Key

The suite of virtualization services are based around the simple principle of continuous improvement. The more an organization matures its systems, operations and management practices, the better value that organization will get from their VMware deployment. No matter where your team is at in the process of selecting, acquiring, planning for, deploying and managing your systems, we can help you to mature to the next level. Organizations adopting this methodology can expect to achieve:

- Better integrated systems infrastructure
- Improved resource reuse and sharing, for lowered costs and raised efficiencies
- Improved predictability and control of budgets
- More consistent and repeatable manageability of systems, networks and storage infrastructure
- Better control and efficiency in managing data
- Higher systems performance and availability
- Lowered administrative burden

Whatever it takes.
