

... Diagnose with confidence

Edge Solutions delivers complete Clarity™ CT dose reduction solutions

Clarity directly addresses the medical community's concern over increased radiation exposure with a market leading post-processing CT image enhancement software solution that enables dramatic dose reduction. Clarity adheres to the ALARA principal providing as low radiation dose as reasonably achievable while ensuring diagnostic confidence in image quality. Some benefits include:

- Clarity™ CT reduces radiation dosages on average by 40%
- Post-processing solution seamlessly integrates into your workflow
- Highly effective solution for obese patients requiring higher dosage for quality images or pediatric patients requiring absolute minimal dosage
- Makes no changes to your scanning process or CT equipment. Clarity™ CT is a post-image processing tool
- Supports industry standard hardware – let Edge Solutions provide the best recommendation based on your current infrastructure
- Scalable from a single CT scanner to an enterprise-wide solution
- Addresses referring physician, patient and community concerns about over-radiating patients and provides your facility with an opportunity to lead the market in patient safety related dose reduction
- Provides a proactive solution to ACR accreditation guidelines and other developing state and federal regulations concerning medical dose reduction
